

Trouble shooting Table Supports
 Hard to adjust and/or handle loose

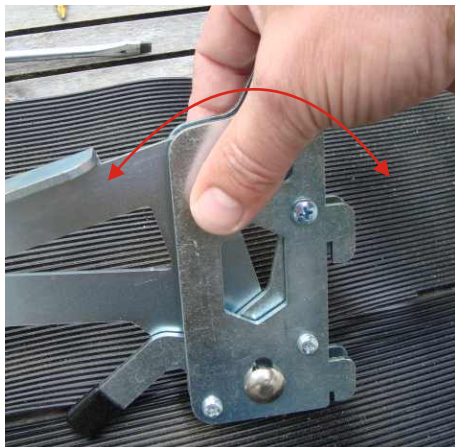

Problem:
 Locking mechanism too loose

Solution:
 Always make sure the adjustment screw is tightened.

Problem:
 Hard to adjust angle of support.
 In some earlier models the caps are pressed on too hard.

Solution:
 Lift caps a tiny little bit with a screwdriver.

It should be possible to turn the caps and the pin. If not the caps are pressed on too hard or may be tilted.

To press or align a cap use something round. For example a cap key (or a starlock tool)
