WITH DANNY LIPFORD

The Radio Source for Reliable Home Advice

Each week, listeners across the country tune into Homefront for useful advice about their homes. The nationally-syndicated call-in radio show is hosted by veteran remodeling contractor Danny Lipford, who is also known for his television appearances as host of Today's Homeowner with Danny Lipford and home expert for The Weather Channel. On every show you'll hear Danny answer questions from listeners about a variety of home topics. And you never know what special guest will drop by to share the microphone, a laugh or two, and some home insights as well. Homefront is informative and entertaining fare for home enthusiasts nationwide.

## Walko Workbench A Must-See Tool

If you are in the market for the perfect workbench – versatile enough to go on any job site and adaptable to any situation – check out the Walko Workbench System.

"The Walko Workbench System features a lightweight, innovative, modular design that is extremely user-friendly, versatile and durable," said Jody Garrett, VP of Marketing and Merchandising at Woodcraft. "This is a 'must-see' product and it is already receiving quite a bit of 'buzz' on the internet."

Woodcraft is the industry leader in providing quality products, educational opportunities and guidance to woodworkers at all skill levels.

The Walko Workbench was designed to be the finest and most adaptable bench system in the world today. The Bench, which is truly multifunctional, features an adjustable working surface consisting of two tables – or tops – which hang from and lock into position on the sides of the "Hinged A-Frame." In the top position, the tables combine to create a large flat work surface. However, the tables hanging from the frame can be lowered, have their height staggered, tilted and even placed on the same side enabling you to adjust to the job at hand.

The Bench can also be unfolded "flat" and placed against a wall or on the floor. In the flat position, the Walko can be used to process plywood, MDF and drywall or when placed against a wall, you can use it like a workbench by hanging tables from it, should space be an issue.

Each of the two product models – the Walko 3 Compact Set and the Walko 4 Professional Set – are light enough to be used in the field yet strong enough to handle any job in the shop. From processing large sheet goods to cutting gutter or water pipe, the Walko System has the potential to change how you work

And, with replaceable, sacrificial spacers built into the bench you're never in danger of cutting the frame. When you're cutting against the bench, the spacers give you a 1.5" area between the frame and your project.

For more information on the Walko Workbench and/or to see photos and product specs, visit [Woodcraft.Com](http://Woodcraft.Com).
